

Class Checklists

These handy-dandy checklists can be used in multiple ways for your planning purposes! Feel free to print only the pages you need for your homeschool planner to keep track of the classes you have taken and/or to plan for future learning opportunities.

Option 1: The Dated Checklist

This list is ordered chronologically according to the date each class was filmed.

- Use it to keep track of upcoming lesson dates if you plan to attend live.
- Use it to pick and choose lessons that relate to things you are learning about in your homeschool or classroom.
- Use it to pick and choose classes based on the interests of your students.

The dates will help you easily locate the class replays in the No Sweat Nature Study Video Library.

Option 2: The Category Checklists

You'll find six category checklists. Three that list classes that fit into the broad subjects of plants, animals, and earth & space science - and three that list the classes that fit into seasonal learning, cross-curricular topics, and special events. If a particular class topic fits into multiple categories, you will see it duplicated on multiple checklists.

- If you're studying a certain topic in your home or classroom, the subject lists can help you find specific lessons that support your learning.
- The seasonal list can help you find fun additions when holidays roll around or seasons change.
- The cross-curricular list includes classes that make strong connections to other subjects like math, history, art, economics, or biographies.
- The special events list is most useful if you're trying to catch every single lesson in the membership. You would want to print this list to go along with the chronological list to have a complete listing of all the classes at your fingertips.

**An asterisk signifies 2022 classes that will become available as the year progresses.*
